September 27, 2021 • 12pm-1pm EST

Webinar Description: From identifying funding opportunities to clicking “submit,” navigating the grant process can be challenging. In this webinar, participants will learn key tips and practices to help them put together stronger, more competitive, and more successful proposals for various funding sources, including the National Fish and Wildlife Foundation’s (NFWF) National Coastal Resilience Fund (NCRF).

Participants will hear about opportunities to develop specific project ideas through site visits and proposal development meetings this winter/spring. This webinar will also feature information about more sustainable approaches to funding and financing.

Participants will be able to apply what they learn to the NCRF funding program. NCRF invests in projects that will create, expand, and restore natural systems in areas that will (1) increase protection for communities from coastal storms, sea- and lake-level changes, inundation, and coastal erosion and (2) improve valuable habitats for fish and wildlife species.

NCRF’s team of Field Liaisons, Throwe Environmental, will be available to show how communities can take advantage of the NCRF and other funding sources.
